EDUCATION

City University of Hong Kong
BS in Computer Science

Hong Kong

Expected Graduation: June 2028

Related Coursework: C++, Python, Java, Data Structures, Computer Networks, Computer Organization

Achievements : Full-Tuition Scholarship(Top 10%) for International Students(HKD640,000)

WORK EXPERIENCE

HedgeSPA React, TypeScript
Software Engineer Intern

Jan 2026

- Optimized portfolio API performance using **TanStack Query**, reducing response time by **40%**
- Refactored **10+** legacy JavaScript functions to modern **React/TypeScript**, reducing tech debt
- Implemented real-time stock prediction view via **WebSocket** connections, serving **1,000+** daily users
- Collaborated with design team to implement **20+** responsive components used across **6** pages

Pyramid AI Next.js, TypeScript
Full Stack Developer intern

Oct 2025 - Nov 2025

- Built WhatsApp GenAI chatbot using **Twilio**, **Next.js**, and **RAG pipeline**, for site safety questions
- Deployed GenAI chatbot handling **500+** daily safety inquiries, reducing support team workload by **70%**
- Integrated uptime monitoring via third-party service, achieving **99.8%** availability during outages

Nnenu React Native, TypeScript, Expo, React
Mobile Developer Intern

Mar 2025 - Aug 2025

- Implemented 2FA using **AWS Cognito**, securing **500+** accounts with SMS/OTP verification
- Built feedback system with **DynamoDB**, collecting **200+** insights that drove 3 product iterations
- Integrated **Mapbox** API for dynamic geospatial filtering, enabling users to discover relevant content
- Increased user session time by **18%** through location-aware content prioritization

PROJECTS

Qustar - AI Powered Bird Identification 📄 🌐 React Native, Expo

- Developed cross-platform mobile app with **500+** downloads and **150+** active users
- Deployed a **FastAPI** inference server on **Railway** hosting the BirdNET model, integrated with **Supabase Edge Functions** to process and store bird species recognition results in under **2 seconds**
- Forged an image recognition system linking the mobile app to **OpenAI**, achieving near-instant bird species classification from user input with **90%** accuracy

Sportan - Sports Talent Analytics Platform 🌐 React Native, Expo

- Engineered a **FastAPI** backend with **SQLAlchemy** and **Supabase**, architecting a data pipeline to process athlete workout history and generate progression trends with analytics
- Developed talent discovery system integrating **OpenAI API** to analyze **30+** biometric metrics and performance tests, generating personalized sport recommendations

DuckLab - AI native Learning platform 🌐 📄 Next.js, Node.js

(Hack The East) - top 30 out of 100 projects

- Orchestrated recursive research agents to synthesize grounded courseware by chaining **Exa AI** context retrieval with strict **Zod** schema
- Built a **sub-500ms** latency voice tutor driving adaptive learning via **Retell AI** WebSockets and async **Supabase** rubric evaluation

SKILLS

Programming Languages: Python, JavaScript, Java, TypeScript, C++
Frameworks: React, React Native, Next.js, Node.js, Expo, FastAPI
Databases: PostgreSQL, DynamoDB, MongoDB, Firebase, Supabase
Tools & Technologies: Docker, Figma, GIT, GitHub, AWS, Azure, Postman, Twilio
